

Warm Up 12/3-12/7

12/3 New seats!!

12/4 Spring elective survey

12/5 The fractions are $\frac{6}{8}$ and $\frac{3}{4}$.

They're different because there are a different amount of pieces, but the value is the same. They are equivalent.

12/6 $\frac{1}{2}$ and 0.5 are equivalent, but one is written as a fraction and the other as a decimal.

$$\frac{1}{2} = \frac{5}{10} \rightarrow \overset{0}{\text{ }} \text{.} \frac{5}{\text{tenths}}$$

$$12/7 \quad \frac{4}{6} \cdot \frac{2}{3} = \frac{8}{18}$$
